

What is a KVM switch?

KVM switches enable users to access and control multiple computer devices from a single keyboard, video and mouse (KVM) console. This includes servers, PCs, workstations and even tablet computers. Anyone using or managing multiple computing devices over short or long distances can benefit from a KVM switch.

This ranges from an engineer switching between multiple computers under his/her desk to an IT administrator maintaining thousands of servers across multiple sites.

What is a Serial Console Server?

Serial console servers, also known as terminal servers, provide IT and network administrators secure, serial-over-IP access and control of serial devices — anytime, anywhere. Raritan provides the most powerful, secure, reliable and easy-to-use console server on the market.

Benefits of KVM and Serial

PRODUCTIVITY

The virtual reach provided by Raritan access products allows administrators and managers to maintain hundreds or even thousands of servers and serial devices by responding to incidents from wherever they are — eliminating travel time, speeding response and increasing productivity.

MULTI-PLATFORM

Not dependent on the hardware, database or operating system from a specific manufacturer, Raritan products supports equipment from different manufacturers, regardless of the state of the equipment.

ACCELERATED INCIDENT RESPONSE

Remote management solutions can dramatically shorten incident response times since administrators can take action from anywhere, even emergency access nights and weekends.

BUSINESS CONTINUITY

Out-of-band access to servers and serial devices in emergency situations. Access, control and manage equipment even if the corporate network itself is down.

SECURITY

Secure, encrypted connections to remote IT devices with advanced security features such as AES encryption, FIPS 140-2 encryption and Smart Card authentication.

KVM-OVER-IP SWITCH

Dominion® KX III

Enterprise IP KVM Switch

The Dominion KX III is Raritan's flagship, enterprise-class KVM-over-IP switch that provides 1, 2, 4 or 8 users with BIOS-level, remote management of 8, 16, 32 or 64 servers in a single switch.
